## **SCIA Engineer 21.0**

## **Description**

SCIA Engineer is an integrated, multi-material structural analysis and design software for all kinds of projects. It can be used for design of steel, concrete, timber, aluminium, and steel-concrete composite structures with worldwide application thanks to the integration of numerous international building codes.

In addition to advanced finite element calculations and code-compliant design, it features integrated tools for modelling, exchange of data with third party applications (BIM), easy reporting and preparation of drawings.

The above software was developed in accordance with the requirements of the ISO 9001 quality system regarding the design, verification and validation, as described the Quality Manual of the SCIA Group International.

The software was validated with respect to the functionality, the performance and the accuracy of the results.

The product description is documented in the product Fact Sheets (in the SCIA Resource centre).
